

WORLD CLASS SKID UNITS FOR WORLD CLASS CUSTOMERS

**A Reliable Fire Products skid unit can transform any pickup
into a fire fighting vehicle in just a few minutes.**

Reliable has taken every step to ensure the customer gets a high quality skid unit every time. The tank is built to last using only co-polymer polypropylene that is UV stabilized and fire resistant. The unit is designed to fit between the fender wells of any standard pickup with an 8 foot bed. The standard reel location allows hose to be deployed to either side. Suction plumbing is designed to allow the user to pump directly from the tank, a hydrant or to draft from a nearby water source when necessary. Skid units can be customized to your exact needs or you can purchase one of our standard units for immediate delivery.
